I am a Full Stack Web Developer with a strong interest in building scalable and user-centric digital products. I specialize in developing modern web applications using technologies such as Next.js and Laravel, with a focus on clean architecture, performance, and maintainability.

During my internship at [BuildWithAngga](#), I contributed to both engineering and product development processes, including building real-world source code projects with Next.js, creating educational coding materials, performing manual quality assurance testing, and refactoring existing Laravel-based systems to improve code quality and performance. This experience strengthened my ability to work across both development and product perspectives.

Outside of work, I actively manage a personal home lab using Proxmox, Docker, and self-hosted services to deepen my understanding of infrastructure, deployment, and real-world system architecture.

I am eager to join a forward-thinking team where I can continue growing as a full stack engineer while building secure, efficient, and impactful applications.

Work Experience

Backend Developer • BuildWithAngga

Internship | September 2025 - February 2026 | Work From Home

- Created and published educational articles containing practical tips and insights for developers on the BuildWithAngga website, contributing to platform content quality and user engagement.
- Performed manual Quality Assurance (QA) testing across multiple web pages to ensure functionality, usability, and consistency, helping maintain a smooth user experience.
- Developed and maintained source code projects using Next.js, including real-world case studies such as digital village management systems, focusing on clean architecture and reusable components.
- Designed and built interactive learning materials for the “Vibe Coding Next.js” class, including a hospital dashboard project integrated with modern development approaches.
- Refactored existing website codebase using Laravel to improve code structure, readability, and overall performance, ensuring better maintainability for future development.

Website Developer • Sekolah Erenos

Internship | February 2023 - Augustus 2023 | Tangerang Selatan

- Developed and maintained the E-Report Erenos web application using Laravel 9 for backend development and Blade for frontend rendering.
- Designed and implemented database structures using MySQL to store and manage student data, teacher information, subjects, attendance, and grades efficiently.
- Created an intuitive dashboard for administrators, teachers, and students to manage academic records and generate final student reports seamlessly.
- Implemented role-based access control (RBAC) to ensure secure and structured access for different user levels within the system.
- Integrated attendance tracking and automated report generation, reducing manual work and improving efficiency in student performance evaluation.

- Collaborated with the academic and IT teams to gather requirements and continuously enhance system functionalities based on user feedback.
- Conducted user training sessions for teachers and staff on how to utilize the system effectively.

Data Entry • PT Reka Optima

Full Time | July 2019 - June 2020 | Tangerang Selatan

- Processed and verified hundreds of aircraft component records daily with high accuracy, supporting smooth operations for the technical team.
- Improved the data entry workflow, reducing input errors and accelerating the verification process.
- Coordinated with relevant teams to ensure all component information was synchronized and ready for use in the aircraft management system.
- Provided basic system training for new employees, enabling faster and more efficient onboarding.

Education

Pembangunan Jaya University

Informatics • 2020 - 2024

GPA: 3,61

Thesis: Web-Based Decision Making Techniques Using Analytical Hierarchy Process in the Teacher Performance Evaluation Process.

Technical Skills

Programming / Tech Stack

- Frontend: React, NextJS, TypeScript, TailwindCSS.
- Backend: Laravel, MySQL, PostgreSQL, RESTful API.
- DevOps & Tools: Docker, Ubuntu Server.
- Version Control: Git, GitHub, GitLab.

Design & Productivity Tools

- UI/UX: Figma (UI slicing, prototyping, handoff to frontend).
- IDE: JetBrains, Visual Studio Code.

Languages

- English — Elementary Proficiency
- Indonesian — Native or Bilingual Proficiency

Project

Home Lab Server with Proxmox

Personal Project • June 2025

- Set up virtualization environment using Proxmox VE to manage multiple VMs and containers.
- Deployed services including Docker, Nextcloud, Jellyfin, Only Office, Grafana and Prometheus for personal use and testing.
- Configured networking, storage, and backup for stable and secure operations.
- Experimented with CI/CD pipelines and container orchestration to simulate production environment.

SIM OBE

Freelance • July 2024 - August 2024

The Outcome-Based Education Management Information System (SIM-OBE) is a digital platform designed to assist educational institutions in implementing and managing outcome-based education (OBE) systems. With comprehensive features, SIM-OBE facilitates academic administration, learning outcome mapping, and analysis of student learning outcomes in an efficient and structured manner.

KinerjaPlus

Thesis • September 2023 - July 2024

KinerjaPlus is a web application designed to facilitate the teacher performance appraisal process at Erenos School. This application aims to provide an effective, efficient, and objective tool in conducting teacher performance appraisals based on predetermined criteria. KinerjaPlus is built using the Laravel 9 framework.

Ereport Erenos

Erenos School • March 2023 - August 2023

E-Report Erenos is a web application built using the Laravel 9 framework. This application provides features for managing student data, teachers, subjects, attendance, grades, and final student report results.

Courses & Certifications

Hacktiv8 Indonesia

React and React Native for Front End Developer • 18 August 2022 - 15 December 2022

This program focuses on learning Modern Javascript which is fundamental to React, retrieving data from the server in a synchronized/asynchronized way, processing data by applying state and props methods, to state management using Redux and using Redux as middleware.

freeCodeCamp

Front End Development Libraries • 03 January 2023

In the Front End Development Library, I learn how to quickly style a site using Bootstrap. I also learned how to add logic to CSS styles and extend them with Sass. In addition, I built a shopping cart and other applications to learn how to create powerful Single Page Applications (SPAs) with React and Redux.

freeCodeCamp

JavaScript Algorithms and Data Structures • 27 December 2022

In the JavaScript Algorithms and Data Structures course, I learned to create algorithms to manipulate strings, factorize numbers, and even calculate the orbit of the International Space Station. In addition, I learned two important programming styles or paradigms, namely Object-Oriented Programming (OOP) and Functional Programming (FP).

freeCodeCamp

Responsive Web Design • 09 July 2022

In Responsive Web Design, I learned the languages used by developers to build web pages: HTML (Hypertext Markup Language) for content, and CSS (Cascading Style Sheets) for design.

Cisco Networking Academy

Networking Essentials • 25 May 2022

Completed foundational training in networking, covering network communication concepts, LAN and wireless network setup, IPv4/IPv6 address management, application layer services, basic network security practices, and Cisco IOS usage to build a simple computer network with Cisco devices.
